

# 20 years with IHC Hytech BV

**IHC Hytech BV** are based in the Netherlands and have over **30 years experience within the diving and hyperbaric markets.** Combining their extensive knowledge with strict safety compliance they supply equipment into both commercial and military applications.

Hytech and Analox have worked together on projects for a number of years, in fact **2 decades**, with Hytech continuing to utilise various Analox analyzers within their systems.

*Robbert de Bie said 'It is good to work with Analox together on this and other projects because their knowledge on analyzers is based on a long experience. Their products are of the highest standard which matches the standard of our equipment too.'*

One such analyzer is the **ACG+ compressed breathing air monitor**. Hytech have supplied this fixed gas analyzer to the **Royal Netherlands Navy (RNN)**.

Both of the ACG units (image above) are fitted working on the **RNN diving simulator** for the air supply, ensuring the team controls the air out of the compressors. The ACG+ warns the team should any contaminants be detected in the breathing air supplied from the compressor.

Due to the performance of the ACG+, **Hytech are currently working on another 15 ACG+ systems** for the RNN who are wanting to check their air according to EN12010 legislation and plan to install ACG+ units to switch between various incoming lines. **Does your system adhere to EN12010?**

We hope to bring you a follow up on how those units are installed in the future!
